

CONSTRUCTION, DEMOLITION, & RENOVATION DEBRIS

What is C&D?

Home improvements add convenience & value to a home. The waste generated by these projects, however, can be an environmental burden as used building material can account for over 25% of solid wastes received on PEI, taking up precious landfill space.

Examples of C&D include:

- leftover lumber (new & used)
- old roofing (shingles, etc.)
- insulation
- gyproc
- various types of siding
- bricks
- old windows & doors
- metal frames and other metal components used in construction
- household fixtures such as toilets, tubs, sinks, etc.

How do I dispose of C&D?

Construction, demolition, and renovation material may be taken to any Waste Watch Drop-Off Center where a fee, based on weight, will be charged.

Please...

- **DO NOT PLACE C&D** items beside your cart or in additional containers beside your cart. These items are not considered regular household waste. If you only have a small amount of debris it may be placed inside the cart, ***but please keep in mind the cart weight maximum for collection is 220 lbs.***
- **DO NOT PLACE C&D** items curbside during Spring and Fall Cleanup. This program is designed for regular household bulky items only, and not as a disposal means for indoor and outdoor renovation projects.

Remember the 3'R's: Reuse, Reduce, Recycle

- Can someone else re-use what you don't need? Consider a renovation yard sale, the classified ads, or contacting the **Habitat for Humanity's RESTORE** outlet for second hand and used construction material.
- Buy high quality, long lasting materials. It will save you \$\$ in the long run and reduce waste.
- Purchase the right amount. Make sure you have just enough for your project. Schedule deliveries to reduce on-site storage time and the potential for damage.
- Look for re-use opportunities. Good quality used fixtures or materials often perform as good as new and save \$\$ too.
